Assignment 1 - Git & GitHub Fundamentals
Report Template

- ***Full Name: Mohamed Amine Rachid***
- ***Student ID: 125143***
- ***Course Code & Section: CSC 3324 02 GROUP C***
- ***GitHub Username: AMRac7***

1. Repository Setup

I accessed the give file using "cd 'file name'" then initialized the repo using "git init". Lastly, I staged all the changes and committed them to my remote repo using "git add ." And "git commit".

In the ".gitignore" file I ignored the ".env", and all ".log" files except for "important.log".

2. README & Commit History

My readme contains the information instructed by the assignment, and I committed and pushed the "readme" each time I changed something to view the changes and see if it is correct.

```
commit b15084a069318bfa1cdb13e5f942ad5d12f8b61e
Author: Amine <socheper@gmail.com>
Date:   Wed Oct 14 00:05:07 2026 +0000

    Moved image placement

commit a13c74d521a133611ac0bcb7a51d18083a28225e
Author: Amine <socheper@gmail.com>
Date:   Wed Oct 14 00:04:04 2026 +0000

    Fixed format in readme

commit 7ed887866e26261592bd7e7ebea1e79cd1eedb01
Author: Amine <socheper@gmail.com>
Date:   Wed Oct 14 00:03:01 2026 +0000

    Fixed format in readme

commit 35a90f406adf2f489b3579931bb079c43f8cc1ef
Author: Amine <socheper@gmail.com>
Date:   Wed Oct 14 00:00:34 2026 +0000

    Fixed image

commit f67f9cc17464f61ef11dd80ee5e662ad2565c808
Author: Amine <socheper@gmail.com>
Date:   Tue Oct 13 23:58:16 2026 +0000

    Added Readme
```

3. Selective Staging

I added a python file and new image in the "readme", I only staged the python file and committed it using "git add pythonfile" and" git commit –m 'added python file' " then pushed it into the repo to see the changes.

4. Branch & Merge

I created a new branch called "NewFeature" using " git switch –c 'NewFeature' " and staged and committed the new image in the "readme" then switched to main using " git switch main" and merged the branch using " git merge NewFeature ".

5. Remote Changes

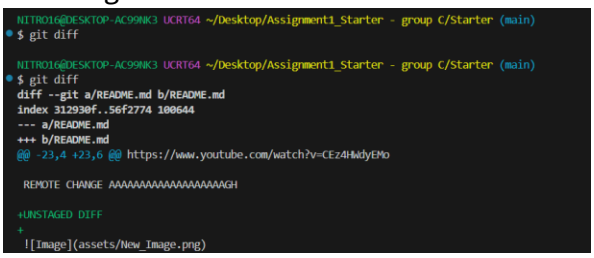

I modified the readme file in GitHub and then used "git fetch" and "git status" to see what the difference between the remote and local repo is.

```
NITRO16@DESKTOP-AC99NK3 UCRT64 ~/Desktop/Assignment1_Starter - group C/Starter (main)
$ git fetch
remote: Enumerating objects: 5, done.
remote: Counting objects: 100% (5/5), done.
remote: Compressing objects: 100% (3/3), done.
remote: Total 3 (delta 2), reused 0 (delta 0), pack-reused 0 (from 0)
Unpacking objects: 100% (3/3), 954 bytes | 106.00 KiB/s, done.
From https://github.com/AMRac7/git-session1-AMRac7
   13b788a..cb8e87a  main       -> origin/main

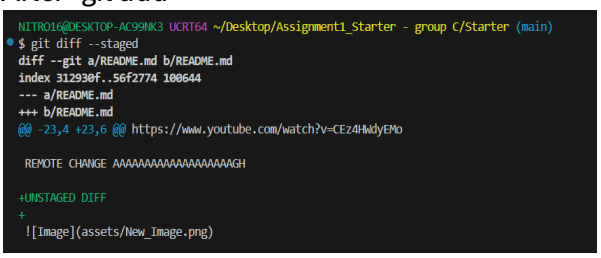

NITRO16@DESKTOP-AC99NK3 UCRT64 ~/Desktop/Assignment1_Starter - group C/Starter (main)
$ git status
On branch main
Your branch is behind 'origin/main' by 1 commit, and can be fast-forwarded.
  (use "git pull" to update your local branch)

nothing to commit, working tree clean
```

Then used " git pull " to download the changes from the remote repo to my local repo.
Finally, I changed the readme file again and used " git diff " and "git diff –staged" to see what will change before I staged and committed the file and after.
Before "git add"

After "git add"

6. Fair Use of AI

I used Claude AI to explain to me some concepts and help me with the commands since I don't know them by heart yet.

7. Sources & Reflection

The most confusing part was the un-staged diff and staged diff, in which I used AI to explain the concept to me. If Git-hub or Git behaved weirdly, which it did during this assignment, I used "git log "and "git status" to see if I did anything wrong.

8. Full log:
